

REST API Mini Project : Employee Management System

Task:

You are expected to configure the **Fake Rest API using JSON Server** and run the **db.json** file on a port number 3000 to manage Employee Details as given below requirements.

And test all the REST API end points using **Post Man**.

Make a **screenshot** of each activity and create the document with proper heading along with screenshots.

Finally submit this document in your repository and update the **Hands-On Tracker**.

ABC Technologies Pvt. Ltd. has more than **500 employees** working across different departments such as IT, HR, Finance, Sales, and Administration.

Currently, employee information is maintained in spreadsheets, making it difficult to:

- Search employee records.
- Update employee details.
- Delete employee details.
- Generate reports.

To solve these issues, the company plans to develop an **Employee Management System (EMS)** using **Java Full Stack** (Java, Spring Boot, REST API, MySQL, HTML/CSS/JavaScript, React or Angular).

Objectives

Develop a **REST API** that enables administrators to:

- Add new employees.
 - View all employees.
 - Search employees by ID.
 - Update employee information.
 - Delete employees.
-

Functional Requirements

Employee Module

Each employee should have:

Field	Type
Employee ID	Integer
First Name	String
Last Name	String
Email	String
Mobile Number	String

REST API Design:

Method	URL	Description
GET	/employees	Get all employees
GET	/employees/{id}	Get employee by ID
POST	/employees	Add employee
PUT	/employees/{id}	Update employee
PATCH	/employees/{id}	Partial update
DELETE	/employees/{id}	Delete employee
